

Business Continuity Plan

Langate Group

1. PURPOSE, SCOPE, AND BUSINESS CONTINGENCY ORGANIZATION

The main purpose of the Business Contingency Plan (BCP) is to develop, test, and document a well-structured and easily understood plan that will help **Langate Group** (hereinafter the Company) recover as quickly and efficiently as possible from an unexpected accident or emergency that interrupts information systems and business operations.

The goal of the Company is to ensure the reliability of the information system, the integrity and availability of data, as well as business continuity.

1.2. Scope

The Disaster Recovery Plan (DRP) is limited to restoring and continuing business due to a major disruption and lack of ability to operate the Company. The DRP includes procedures for all recovery steps as defined in section 2 - "BUSINESS CONTINUITY STRATEGY".

This plan is separate from the Company's Process-specific disaster recovery plan, which focuses on the recovery of technology facilities and platforms, such as critical applications, databases, servers, or other required technology infrastructure.

Unless otherwise modified, this plan does not address temporary interruptions of duration less than the time frames determined to be critical to business operations.

The scope of this plan is aimed at disasters such as fires, floods, earthquakes, explosions, terrorism, military operations, pandemics, tornadoes, extended power interruptions, hazardous chemical spills, and other natural or man-made disasters.

1.3. Business Contingency Organization

The teams associated with the plan represent functions of a department or support functions developed to respond, resume, recover, or restore operations or facilities of Company and its affected systems. Figure 1 - Business Contingency Organizational Chart shows the base organizational structure.

Details of the Emergency Response and Disaster Recovery teams' work are described in section 4 - "EMERGENCY RESPONSE".

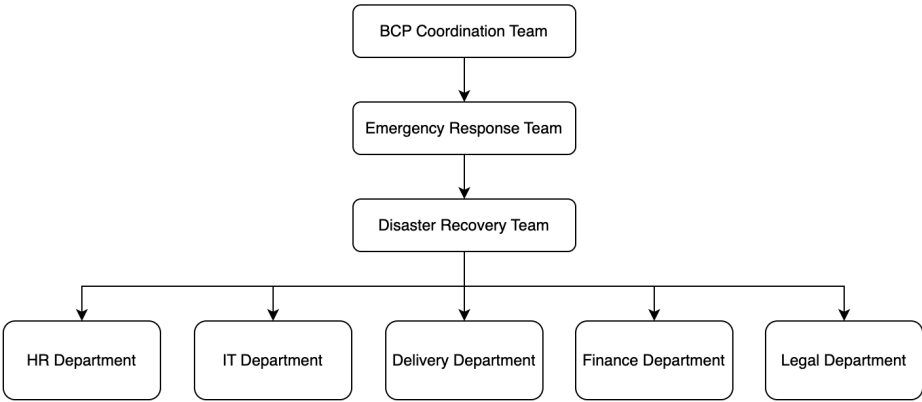

Figure 1. Business Contingency Organizational Chart

1.3.1. BCP Coordination Team

The BCP Coordination Team coordinates BCP strategy development and controls and coordinates the activities of the Emergency Response Team, Disaster Recovery Team, Team Leaders, Business Process Owners, and Management. This team initiates recovery plans with the Emergency Response Team and coordinates efforts from the beginning of a disaster through to successful recovery.

The team includes Langate Group's President and C-level management.

2. BUSINESS CONTINUITY STRATEGY

2.1. Introduction

This section describes the strategy devised to maintain business continuity in the event of a facilities disruption. This strategy would be invoked should the Company primary facility somehow be damaged or inaccessible.

It is assumed that each critical business function at the Company also has their own group/department Business Continuity Plan, which is similar to this plan except the recovery procedures and appendices have been customized for each respective group/department based on size, and complexity.

2.2. Business Function Recovery Priorities

The strategy is to recover critical business functions at the alternate site location.

The main requirement for the continuation of the Company's activities is the availability of Internet access. Therefore, when searching for an alternative location for the company's specialists, it is necessary to ensure that this requirement is met.

2.3. Relocation Strategy and Alternate Business Site

In the event of a disaster or disruption to the office facilities, the strategy is to recover operations by relocating to an alternate business site. The short-term strategies (for disruptions lasting one month or less), includes relocation of specialists to alternative location No1. Under alternative location No1, means the transfer of team members in remote mode in places with the presence of the Internet (home, Internet cafe, etc...).

Long-term strategies will be to acquire / lease and equip new office space in another building in the same metropolis. This location will be called - alternative location #2.

Primary Location	Alternate Business Site No1	Alternate Business Site No2
Remote home offices	Remote work in places with the presence of the Internet (house, Internet cafe, etc...)	USA, NYC office: 1460 Broadway, NYC, NY 10036 (location, card access) Ukraine, Partner office: Serpova Street 4B, Kharkiv, 61000 (location, card access) Ukraine, Partner office: Naukova Street 7D, Lviv, 79060 (location, card access)

		Rented or purchased space in another building.

3. PLAN OVERVIEW

3.1. Plan Updating

It is necessary for the disaster recovery plan updating process to be properly structured and controlled. Whenever changes are made to the plan they are to be fully tested and appropriate amendments should be made to the training materials. This will involve the use of formalized change control procedures under the control of the Chief Operating Officer (COO) and/or Human Resource Director (HRD).

3.2. Plan Documentation Storage

Copies of this plan must be stored on the personal computers of BCP Coordination Team members. The master-protected original document must be stored on the enterprise cloud storage created for this purpose.

3.3. Backup Strategy

Key business processes run in Microsoft 365 and are backed up automatically using the SkyKick Cloud Backup tool. The strategy chosen is to create a snapshot of the running system. If necessary, system recovery is performed from a previously created snapshot.

The frequency of backups, their storage time, the need for a backup depends on the importance of the instance and is determined individually for groups of instances by the owner of the information resource.

3.4. Risk Management

There are many potential threats that can occur at any time and affect a normal business process. We have reviewed a wide range of potential threats and the results of our discussions are included in this section. Each potential environmental disaster or emergency is studied. The focus here is on the level of business failures that can result from each type of disaster.

Threats were evaluated in accordance with the *Risk Assessment Policy*. The risk assessment is presented in the Risk Assessment Register on the Drata platform: <https://app.drata.com/risk-assessment>.

4. EMERGENCY RESPONSE

4.1 Alert, escalation, and plan invocation

4.1.1. Plan Triggering Events

Key issues that arise in the office space that can lead to the activation of DRP:

- Room flooding
- Fire
- Tornado
- Acts of terrorism
- Military operations
- Pandemic
- Prolonged lack of power supply

- Prolonged lack of Internet
- Loss of building

4.1.2. Assembly Points

In cases where evacuation of premises is required (Alternate Business Site No2), the DRP call plan defines two evacuation assembly points:

- **The main one** is a parking lot next to the office;
- **Alternative** - Road crossing from office to avenue;

4.1.3. Activation of Emergency Response Team (ERT)

If an incident occurs, the Emergency Response Team must be activated. The ERT then decides to what extent the Disaster Recovery Plan should be called.

The ERTs are responsible for:

- Immediate response to a potential disaster and emergency call.
- Assess the scale of the disaster and its impact on business, data centers, etc.
- Decide which elements of the disaster recovery plan should be activated.
- Establish and manage a Disaster Recovery Team to maintain critical services and return to normal operation.
- Ensure that specialists are notified and assign responsibilities and operations as needed.

4.1.4. Disaster Recovery Team (DRT)

When business continuity plans are activated, the ERT forms a Disaster Recovery Team, which is authorized to make any decisions to resolve the situation.

The DRT will consist of senior representatives from the main business departments. The DRT Leader will be a senior member of the company's management team and will be responsible for taking overall charge of the process and ensuring that the company returns to normal working operations as early as possible.

4.2. Emergency Alert and Plan Activation

This policy and procedure have been established to ensure that in the event of a disaster or crisis, personnel will have a clear understanding of who should be contacted. Procedures have been addressed to ensure that communications can be quickly established while activating disaster recovery.

The Disaster Recovery Plan will rely principally on key management members and specialists who will provide the technical and management skills necessary to achieve a smooth technology and business recovery. Suppliers of critical goods and services will continue to support the recovery of business operations as the company returns to normal operating mode.

4.2.1. Emergency Alert

The person discovering the incident calls a member of the Emergency Response Team in the order listed:

Emergency Response Team

- Chief Operating Officer (COO)
- Human Resource Director (HRD)

If not available, try:

- Chief Technology Officer (CTO)
- IT Administrator

The Emergency Response Team is responsible for activating the DRP for disasters identified in this plan, as well as in the event of any other occurrence that affects the company's capability to perform normally.

One of the tasks during the early stages of the emergency is to notify the Disaster Recovery Team (DRT) that an emergency has occurred. The notification will request DRT members to assemble at the site of the problem and will involve sufficient information to have this request effectively communicated.

4.2.2. Disaster Recovery Procedures for Management

Management team members must keep a printed copy in their departments with a list of the names and contact numbers of each specialist. In addition, if the headquarters building is inaccessible, unsuitable or destroyed, members of the management team must have a hard copy of disaster management and business continuity plans in their home.

You can store documents in cloud storage when you have 24-hour access to them.

4.2.3. Contact with Staff

Specialist managers will act as coordinators for their departments, and designated specialists will call other Specialists to discuss the crisis/disaster and the Company's immediate plans.

If it is not possible to contact specialists included in their list of calls, it is necessary to transmit information about the disaster by any available means of communication (mobile communications, e-mail, instant messengers, etc.).

4.2.4. Backup Staff

If a manager or specialist designated to contact other specialists is unavailable or incapacitated, the designated backup specialist will perform notification duties.

4.2.5. Recorded Messages / Updates

For up-to-date information on the Company's disaster and response measures, specialists receive information through corporate communication tools. The reports will include data on the nature of the disaster, places of collection, and updates on the resumption of work.

4.2.6. Alternate Hot Site

If necessary, the hot Site is activated, and the notification is transmitted via communication with the emergency response team. Specialists will work on the "hot site" as necessary.

When the highest level of threat is declared, specialists in full force switch to remote work from home.

Notifications will be sent through corporate communication channels or other available means of communication.

4.2.7. Personnel and Family Notification

If the incident has led to a situation that may cause concern for the professional's immediate family, such as hospitalization, they should be informed.

5. MEDIA

5.1. Media Contact

Assigned specialists will coordinate with the media, working according to guidelines that have been approved for dealing with post-disaster communications.

5.2. Media Strategies

- Avoiding adverse publicity
- Take advantage of opportunities for useful publicity
- Have answers to the following basic questions: What happened? How did it happen? What are you going to do about it?

5.3. Rules for Dealing with Media

Designated personnel will coordinate with the media in accordance with guidelines previously approved for liaison during and after natural disasters.

The communication procedure is as follows:

- Any specialist who receives a communication request or wants to initiate communication with interested parties must forward the request to the Chief Operating Officer (COO) and/or Human Resource Director (HRD).
- A responsible person must agree on the content of the communication.
- If the communication with external parties includes significant risks and impacts, the decision about such communication must be documented and formally approved by the CEO before such information is released.

A responsible person documents each communication with any interested party and provides information after getting appropriate approval.

6. FINANCIAL AND LEGAL ISSUES

6.1. Financial Assessment

The emergency response team shall prepare an initial assessment of the impact of the incident on the company's financial affairs. The assessment should include:

- Loss of financial documents.
- Loss of revenue.
- Theft of checkbooks, credit cards, etc.
- Loss of cash.

6.2. Financial Requirements

The immediate financial needs of the Company must be addressed. These can include:

- Cash flow position
- Temporary borrowing capability
- Upcoming payments for taxes, payroll taxes, Social Security, etc.
- Availability of company credit cards to pay for supplies and services required post-disaster

6.3. BCP Compensation Program

In the event of a power outage, Internet outage, or deterioration of the military situation in your region, every company employee or contractor can use the BCP compensation program described on the Langate PeopleForce portal: https://langate.peopleforce.io/knowledge_base/articles/85597-business-continuity-policy-bcp.

6.4. Legal Actions

The Chief Executive Officer (CEO) and Lawyer will jointly consider the impact of the incident and decide whether there may be legal action arising from the event, in particular, the possibility of claims or legal action against the

Company.

7. DRP EXERCISING

Testing DRP plans is an important part of the plan development process and has proven effective during the pandemic and wartime in Ukraine, ensuring that all members of the process are familiar with their tasks and, more importantly, confident in their capabilities.

The DRP will work smoothly and efficiently if those involved in the plan have rehearsed the action plan and their responsibilities a minimum of 1 time. The plan must also be confirmed by modelling the circumstances in which it should operate and monitoring what is happening.
