

Password Policy

Langate Group

Purpose

This policy describes the procedure for selecting and securely managing passwords at Langate Group.

Scope

This policy applies to all Langate Group employees, contractors, and other third parties who have an account on any system that resides at any company facility or has access to the company network.

Roles and Responsibilities

- **IT Manager:** Responsible for the initial password distribution, management, and multi-factor authentication (MFA) for Microsoft systems.
- **ISMS Manager:** Makes decisions on granting access and is responsible for setting up MFA for non-Microsoft systems.

Password Requirements/Authentication Protocol

Complex passwords are required where technically supported. Complex password requirements:

- Must have at least 10 characters comprised of:
 - 1+ uppercase letter(s)
 - 1+ lowercase letter(s)
 - 1+ digit(s)
 - 1+ non-alphanumeric character(s) like (!, #, @, etc.)

Password Use Rules:

- Do not reuse previously used passwords or their variants for at least the last five password changes.
- Do not use commonly used or easy-to-guess passwords (like P@\$\$w0rd!).
- Do not base passwords on dictionary words or combinations thereof.
- Do not use the same passwords across distinct services and systems.
- Change passwords every 180 days unless a secure alternative, such as multi-factor authentication (MFA), is in place.

Multi-Factor Authentication Requirements

MFA must be enabled for any and all systems that provide the option for Multi-Factor Authentication.

Password Distribution

- If you are required to maintain your own secret authentication, you will be provided initially with unique, individual, and secure temporary secret authentication information in a secure manner, which you must acknowledge receipt of and change on first use.
- Temporary secret authentication information will be non-guessable and unique for each user. Commonly used compromised usernames and password combinations from hacked systems must not be used.
- A user's identity will be verified and transmitted to the user in a secure manner (e.g., over an authenticated and protected channel) prior to providing new, replacement, or temporary authentication information. Unprotected (clear text) electronic mail messages must be avoided for this purpose.

- Records of significant events related to the allocation and management of authentication information must be maintained through approved record-keeping methods (e.g., by using an approved password manager tool).

Password Protection

- All passwords are confidential and should not be shared with anyone. If you receive a request to share a password, deny the request and contact the system owner for assistance in provisioning an individual user account.
- Do not write down passwords, store them in emails, electronic notes, or mobile devices, or share them over the phone. If you must store passwords electronically, do so with a password manager approved by Langate Group.
- Langate Group's approved Password Manager: 1Password.
- If you must share a password, do so through the approved password manager or grant access to an application through a single-sign-on (SSO) provider.
- If a password is suspected of being compromised, it should be rotated, and the IT Manager should be notified immediately.

Password Manager Policy

- All employees, contractors, and third parties must use the approved password manager (1Password) for storing and managing passwords.
- Passwords stored in the password manager must adhere to the complex password requirements outlined in this policy.
- The password manager must be configured to use MFA for access.
- Regular audits will be conducted to ensure compliance with the password manager policy.
- Training on the use of the password manager will be provided to all new employees and periodically to existing employees.

Enforcement

An employee or contractor violating this policy may be subject to disciplinary action.
