

Physical Security Policy

Langate Group

Purpose

The Physical Security Policy ensures Langate Group's information assets are protected by physical controls to prevent tampering, damage, theft, or unauthorized access. This policy defines:

- Physical security perimeters and required controls
- Personnel and visitor access controls
- Protection of off-site equipment

Scope

This policy applies to all Langate Group physical facilities and users of information systems, including employees, contractors, and any external parties with physical access to the company's information systems. It must be readily available to all users.

Background

Langate Group aims to safeguard information both virtually and physically, providing a safe and secure environment for all employees and contractors. Access to Langate Group facilities is limited to authorized individuals only. All employees and contractors must report incidents of unauthorized access or visitors.

Roles and Responsibilities

ISMS Manager:

- Oversee the implementation and enforcement of the Physical Security Policy.
- Ensure all physical security measures are maintained and updated as necessary.

Facility Manager:

- Manage physical access controls, including badge readers and smart locks.
- Ensure maintenance and repair of physical security equipment.
- Revoke and re-provision access when keys or badges are reported lost/stolen.

Employees and Contractors:

- Follow physical security requirements and procedures.
- Report unauthorized visitors and access to their manager or the Facility Manager.
- Wear employee badges in secure areas and comply with visitor escort policies.

Visitors:

- Be escorted by a Langate Group employee or contractor in secure areas.

Policy

General

- Physical access to Langate Group facilities is restricted.
- Employees and contractors must wear badges in secure facilities (e.g., server rooms and data centers).
- Employees and contractors must follow documented physical security requirements and procedures.
- Visitors and vendors must always be escorted by a Langate Group employee or contractor.
- Incidents of unauthorized access or visitors must be reported to management.
- Records of physical access, including visits, maintenance, and repairs, will be maintained for at least 3 years.
- Building security (e.g., fire extinguishers, detectors, escape routes) will be maintained according to local laws and regulations.

Access Requirements

- Use badge readers and/or smart locks to restrict physical access and track all entries.
- Lock restricted areas when unattended.
- Only authorized employees and contractors receive access to restricted areas.
- Access and keys will be revoked upon termination of employees and contractors.
- Lost/stolen keys or badges must be reported to the manager, IT Manager, or Facility Manager.
 - Facility Manager or designee will revoke access to lost/stolen badges or keys and re-provision access as needed.
 - Locks will be changed within 7 days of a physical key being reported lost/stolen.

Visitor Access

- Visitors must sign a log indicating entry/exit times, organization represented, purpose of visit, and company point of contact.
- Only authorized personnel can access delivery and loading areas.
- Inspect incoming materials for discrepancies, issues, or threats and register them according to Asset Management procedures.
- Incoming and outgoing shipments will be physically segregated when possible.

Enforcement of Facility Access Policies

- Violations must be reported to the department team leader, HR, IT Manager, or Top Management.
- Employees and contractors violating this policy are subject to disciplinary action, up to and including termination.
- Visitors violating this policy may lose vendor privileges and/or have their services terminated.

Workstation Security

- Only authorized employees and contractors may access and use workstations for job responsibilities.
- Unauthorized workstation access attempts will be monitored and reported as per the System Access Control Policy.

Building Standards per Location

Standards

- A security perimeter will be established to protect sensitive data and critical information processing facilities.

- Windows and doors will be secured with locks and access control mechanisms, and entry points will be monitored with cameras as needed.
- Perimeter spaces will be monitored with CCTV or security patrols; CCTV recordings will be kept for at least 3 months.
- Alarms will be activated outside working hours.
- The most sensitive assets will be stored in the most secure areas using the “onion technique.”
- IT equipment will be housed in a centralized fashion with protected access.
- A controlled reception area will be established where visitors report first, and security guards challenge unknown persons.
- Offsite backup locations will be physically secure, and security measures will be reviewed annually.

Locations

- USA, NYC office: 1460 Broadway, NYC, NY 10036
- USA, Colocation: Rackspace, 125 Belmont Ave, Somerset, NJ
- Ukraine, Partner office: Serpova Street 4B, Kharkiv, 61000
- Ukraine, Partner office: Naukova Street 7D, Lviv, 79060

All locations are secured and require an access card for entry.

Data Center Security

- The physical security of data centers is ensured by Langate Group’s cloud infrastructure service providers.

Asset Security

The following factors will be considered and implemented, as applicable per risk assessments, and in conjunction with the following policies: *Information Security Policy*, *Asset Management Policy*, *Data Protection*, and *Data Classification*.

External/Environmental Threats

- Assets will be located in designated facilities with protection equivalent to their sensitivity and criticality.
- Risk mitigation for environmental threats will be implemented (e.g., weather, malicious attacks, and accidents).
- Monitoring of environmental conditions will be instituted (e.g., fire/smoke, temperature, water, power continuity, humidity, cleanliness).
- Environmental controls will be implemented (e.g., HVAC, drainage, fire suppression, emergency lighting, continuous power, humidity control) as appropriate.
- Data centers will contain necessary environmental controls.

Backup Power

- Provide continuous power for mission-critical information assets through battery-operated UPS protection.
- Use backup generators for higher levels of protection.

Emergency Power Shut-off

- Locate emergency power off switches near emergency exits in equipment rooms for rapid power down.

Alarm Systems

- Periodically review and evaluate alarm system configurations to detect malfunctions and reconfigure as necessary.

Off-Site Equipment and Security

- Take equipment off-site only for valid business reasons with authorization from the ISMS Manager.
- Ensure physical protection of off-site equipment and secure it at all times.
- Record equipment removal and return.

Cabling Protection

- Protect power and telecommunications cabling against interference, data capture, or physical damage.
- Use markers or labels to identify cables and minimize handling errors.
